

The image displays a collection of HepcoMotion GV3 linear guide and drive system components against a dark blue background. At the top, a large, detailed view shows a cross-section of a linear guide assembly, including a stainless steel rail, a stainless steel carriage with a ball bearing, and a stainless steel nut. Below this, various other components are scattered, including stainless steel rails of different sizes, stainless steel carriages, stainless steel nuts, stainless steel rollers, and a blue electric motor. The components are arranged in a way that suggests they are part of a complete system.
